8. EXPOSURE CONTROLS / PERSONAL PROTECTION

8.1 Control parameters

Preventive industrial and medical examinations must be carried out according to the application area. Engineering controls are used to remove a hazard or place a barrier between the worker and the hazard.

Well-designed engineering controls can be highly effective in protecting workers and will typically be independent of worker interactions to provide this high level of protection.

8.1.1 Occupational exposure limits

Cas No	Component	ml/m ³	ml/m ³	Fib/cc	Category	Origin
64-17-5	Ethanol	1000	1900		TWA (8h)	PEL
74-98-6	Propane	1000	1800		TWA (8h)	PEL

Cas No	Component	ml/m ³	ml/m ³	Fib/cc	Category	Origin
106-97-8	Butane	800	1900		TWA (8h)	ACGIH
75-28-5	Isobutane	800	1800		TWA (8h)	ACGIH

8.2 Exposure controls

Adequate ventilation should be used during processing.

Use process enclosures, local exhaust ventilation or other engineering controls to keep worker exposure to airborne contaminants below any recommended or statutory limits.

8.2.1 Appropriate engineering controls:

Provide exhaust ventilation or other engineering controls to keep the airborne concentrations of vapors below their respective threshold limit value.

Ensure that eyewash stations and safety showers are proximal to the work-station location.

Keep away from food, drink and animal feeding stuffs.

Use personal protective equipment according to EN⁶ standards.

See Section 7

8.2.2 Individual protection measures, such as personal protective equipment

8.2.2.1 Eye / Face protection:

Wear safety glasses

In the event of heated product exposure, face shield must be used and remove contact lens as soon as practicable.

Contact lenses may pose a special hazard; soft contact lenses may absorb and concentrate irritants. (EN 166)

- Considering the parameters specified by the glove manufacturer, check during use that the gloves are still retaining their protective properties. It should be noted that the time to breakthrough for any glove material may be different for different glove manufacturers.
- Gloves must only be worn on clean hands. After using gloves, hands should be washed and dried thoroughly.

Body protection

- Choose body protection according to the amount and concentration of the dangerous substance at the work place.

Other protection

- Handle in accordance with good industrial hygiene and safety practice.
- Wash hands before breaks and at the end of workday.
- Prophylactic use of protective ointment (barrier cream) is recommended.

8.2.2.3 Respiratory protection

- Use a respiratory protective device with particle filter/dust mask CEN with an approved standard if a risk assessment indicates this is necessary.
- Respirator selection must be based on known or anticipated exposure levels, the hazards of the product and the safe working limits of the selected respirator.

8.2.3 Environmental exposure controls

- Legislation for the protection of the environment must be met in full.
